

... bizSAFE

There are 5 levels in the bizSAFE programme.

Level 1 - The company's top management demonstrates its commitment by attending a workshop and establishing its Workplace Safety and Health Policy.

Level 2 - The company selects a Risk Assessment Champion to attend a bizSAFE Course on Risk Management and establishes a Risk Management Implementation Plan.

Level 3 - The company, with the guidance of a consultant, implements the Risk Management Plan.

Level 4 - The company selects a leader to attend training in Workplace Safety and Health Management System and then establishes the Implementation Plan.

Level 5 - This Workplace Safety and Health Management Implementation Plan is put into action, after which an independent third party certification company audits and certifies that it meets the SS506 requirements (or an international standard like OHSAS 18001:2007).

Accidents at worksites (including our Clients' premises) can be avoided if only people will observe some simple safety precautions. Yet some 27 workers across all industries get hurt every day in Singapore.

The 3 top reasons for deaths that occur in workplaces are falling from heights, being struck by falling objects and fire and explosions/exposure to harmful substances.

And what is the most common type of accident in the Pest Management Industry? No it is not pesticide poisoning. It is road accidents.

Something must be done to eliminate the unnecessary suffering of workers and their family. On 1 April 2008 the Workplace Safety and Health Council (WSH Council) was established to raise the workplace safety and health standards in Singapore.

bizSAFE was set up to help industry better manage WSH, promote safety and health at work, to recognize companies with good WSH records and to set acceptable WSH practices.

Then the company is awarded the bizSAFE STAR by the WSH Council. Should a serious accident occur the company's bizSAFE status will be revoked.

To enjoy the bizSAFE status it is important that the company and all its employees promote a Safety Culture in which they understand the hazards and risks involved in their operation, they know and agree on what is acceptable and unacceptable,

they are encouraged to voice their safety concerns and they are committed to develop and apply their skills and knowledge to enhance safety.

Safety must be everyone's concern.
