A GET TOGETHER OF THE ROLLINS' BRANDS IN USA

This March 2023, our Managing Director Lily Lim flew over to visit the Rollins head office in Atlanta, USA. While there, she had the opportunity to meet up with the various Rollins department heads to understand more about the support that our home office provides to international brands such as at Aardwolf Pestkare. In addition, Lily even got to meet her overseas counterparts from Australia and the United Kingdom!

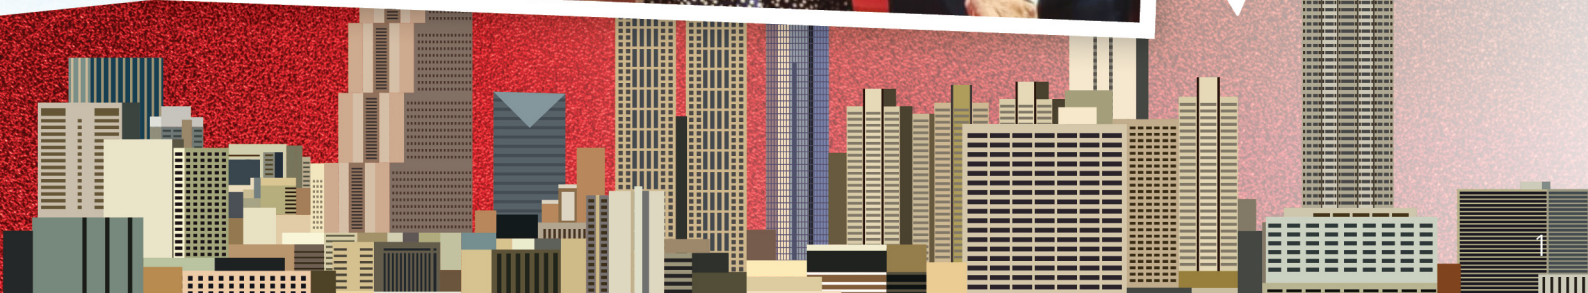

From front:

Simon Richards, back from left, Matt Turek, Division President Orkin International, Pennie Gadd and Lily Lim.

From left to right:

We have Simon Richards, Managing Director of Orkin Australia, Lily Lim, Pennie Gadd, Managing Director of Safeguard Pest Control (UK) together with our Rollins Chairman, Mr Gary W Rollins.

PROFESSIONALISM IN OUR APPEARANCE

The professional image of our Service Team extends beyond their physical appearance and uniform; our vans are usually the first thing that our Clients see when our Technicians drive up to their doorstep. As part of our annual vehicle inspection, we organized a challenge to find the cleanest and most organized vans in Aardwolf!

Of our fleet of 55 vans, 2 Technicians came out on top. Congratulations to Ismadi Bin Hassim and Zulhairi Bin Mohammad Ali! Their vans were sparkling on the outside, and just as clean on the inside. Thank you for maintaining our high standards!

Here is short interview with our 2 deserving winners:

Zulhairi Bin Mohammad Ali

Q Do you have any tips on how to maintain your van constantly squeaky clean and polished?

A Once I reached the carpark at my home, I will wipe my van to prevent any dirt and dust that might cling onto its surface, especially after heavy rain. I will also wax my van once a week to maintain the paintwork!!

Ismadi Bin Hassim

Q What motivates you to keep your van polished and clean each day?

A Driving in a polished & clean van makes me feel good and proud. It also projects a good image for the company and myself as I'm always looking professional and sharp!! I have a monthly schedule to maintain the van internally & externally.

AN EDUCATIONAL TRIP TO BROADEN OUR HORIZONS

We were honoured to be part of the entourage from Bentz Jaz to visit the newly established Sumitomo Health and Technology Centre located in Seramban, Malaysia. Calvin Wong Sheng Kai and Muhammad Nazmi Bin Osman were the 2 lucky representatives who were able to join the excursion from 20 to 22 March 2023.

This visit to the Sumitomo Lab offered a unique opportunity to gain valuable insights into the most recent technological advancements and cutting-edge research by Sumitomo. For instance, they were able to witness first-hand how Mirakn CO2 gas and Sumipro eliminated Cockroaches and Mosquitoes, respectively. Calvin and Nazmi were also able to network with industry experts and other representatives from the pest management industry, as seen from these pictures here.

Bottom row, right, Nazmi bin Osman.
Top row, right, Calvin Wong Sheng Kai.

GETTING TO KNOW...

PREVENT SEWER FLIES FROM INFILTRATING INTO YOUR PREMISES CHOOSE GREEN DRAIN

Sewer Flies can spread diseases through physical contact in food areas. If that isn't bad enough, inhaling the disintegrated Sewer Fly bodies can trigger an asthma attack.

Green Drains are a floor trap seal which has a revolutionary design that works by preventing Sewer Flies from infiltrating via the drains, while still allowing for water to flow easily.

Green Drains are ICC (International Code Council) certified, and are available in 5 sizes from pipe size 36 mm to 110 mm, therefore covering a complete range of floor trap sizes in Singapore.

Unlike other products, Green Drains provide a waterless trap seal protection due to its Self-Cleaning Self-Sealing Membrane Technology. They are easy to install and remove, eliminating the need for complex repairs. Green Drains save time, water, and cost without the use of harsh chemicals to clean your drains.

Green Drains are also made from 63% renewable materials and 100% of the componentry can be recycled, making them an effective and environmentally-friendly solution to get rid of those pesky Sewer Flies.
